L2 PROBLEM 10 (5 points possible)

Write a piece of Python code that prints out the string 'hello world' if the value of an integer variable, happy, is strictly greater than 2.

For problems such as these, do not include [raw input] statements or define the variable [happy] in any way. Our automated testing will provide a value of [happy] for you - so write your code in the following box assuming [happy] is already defined.
