## L3 PROBLEM 2A (2 points possible)

In this problem you'll be given a chance to practice writing some while loops.

1. Convert the following code into code that uses a while loop.

```
print 2
print 4
print 6
print 8
print 10
print "Goodbye!"
```

## L3 PROBLEM 2B (2 points possible)

2. Convert the following code into code that uses a while loop.

```
print "Hello!"
print 10
print 8
print 6
print 4
print 2
```

L3 PROBLEM 2C (3 points possible)
3. Write a while loop that sums the values 1 through end, inclusive. end is a variable that we define for you. So, for example, if we define end to be 6, your code should print out the result:
21
which is 1 + 2 + 3 + 4 + 5 + 6.
For problems such as these, do not include <code>raw_input</code> statements or define the variable <code>end</code> . Our automating testing will provide a value of <code>end</code> for you - so write your code in the following box assuming <code>end</code> is already defined.
Hint: Don't Use A Variable Called 'sum'
