## L2 PROBLEM 1 (5/5 points)

For each of the following expressions, indicate the type of the expression. While you could simply type these expressions into an IDLE or Canopy shell, we encourage you to answer them directly since this will help reinforce your understanding of basic Python expressions.

| xpressions.                     |                   |
|---------------------------------|-------------------|
| 1. [3.14]                       |                   |
| float ▼                         |                   |
| <b>2.</b> [-34]                 |                   |
| int ▼                           |                   |
| 3. True                         |                   |
| bool                            |                   |
| 4. None                         |                   |
| NoneType •                      |                   |
| <b>5.</b> 3.0                   |                   |
| float ▼                         |                   |
| Note: The Python 'None' keyword |                   |
| Check Show Answer               |                   |
|                                 |                   |
| Show Discussion                 | <b>⊘</b> New Post |
|                                 |                   |

## Contact (https://www.edx.org/contact)

EdX is a non-profit created by founding partners Harvard and MIT whose mission is to bring the best of higher education to students of all ages anywhere in the world, wherever there is Internet access. EdX's free online MOOCs are interactive and subjects include computer science, public health, and artificial intelligence.
