Help

L4 PROBLEM 10 (5 points possible)

Define a function `isVowel(char)` that returns True if `char` is a vowel ('a', 'e', 'i', 'o', or 'u'), and False otherwise. You can assume that `char` is a single letter of any case (ie, `'A'` and `'a'` are both valid).

Do not use the keyword `in`. Your function should take in a single string and return a boolean.

```
1 def isVowel(char):
2     '''
3     char: a single letter of any case
4
5     returns: True if char is a vowel and False otherwise.
6     '''
7     # Your code here
8
```

Unanswered

Hint: A good operation to use
